

## A Sermon on Ghosts

Sermon by Rev. Minister Angela Smith of COPE for October 6th, 2024 (and beyond)

This sermon is in hypothetical scenario and questions format for your meditative contemplation and consideration.

HYPOTHETICAL SCENARIO (& QUESTIONS): The human body is 9.5% hydrogen.

Source: <https://biobeat.nigms.nih.gov/2015/07/elements-that-keep-us-alive-also-give-color-to-fireworks/>

Hydrogen is 13.8 billion years old and/or ageless (as old as the universe).

Grey Hydrogen is referred to as the Grey Ghost in energy science and engineering circles. Source: <https://www.topgarmag.in/features/tg-explains/unveiling-the-rainbow-a-deep-dive-into-colored-hydrogen-and-its-race-against-electric-cars>

“Hubble has photographed the "Ghost Nebula," which has eerie, semitransparent flowing veils of gas and dust. The nebula is being blasted by a torrent of radiation from a nearby, blue-giant star.” Source: <https://hubblesite.org/contents/media/videos/2018/42/1182-Video.html?tag=dark%20nebulas>

“The nebula's ethereal glow might remind people of apparitions such as those reported by paranormal investigators. In reality, it's simply hydrogen that is being bombarded with ultraviolet radiation from the nearby, blue-giant star Gamma Cassiopeiae (not seen here), causing it to glow in red light.” Source:

<https://hubblesite.org/contents/media/images/2018/42/4242-Image.html?news=true> “In

the new study, a team of researchers based at Oxford's Department of Materials and the SLAC National Accelerator Laboratory, California made the surprising discovery that the movement of individual ions can be influenced by its recent past; in other words, there is

‘a memory effect.’ This means that, on the microscopic scale, history can matter: what a particle did a moment ago can affect what it does next.” Source:

<https://www.ox.ac.uk/news/2024-02-15-innovative-technique-reveals-leaping-atoms-remember-where-they-have-been> “A DNA molecule consists of two long polynucleotide

chains composed of four types of nucleotide subunits. Each of these chains is known as a DNA chain, or a DNA strand. Hydrogen bonds between the base portions of the nucleotides hold the two chains together.” Source:

<https://www.ncbi.nlm.nih.gov/books/NBK26821/> “Adult cells maintain complete molecular 'memory' of their embryonic origins.” Source:

<https://hms.harvard.edu/news/rememberance-things-past> “Neutral hydrogen is the major source of radio wave data that has been collected from space.” These radio waves are

electromagnetic frequencies. Source:

Do you believe in ghosts?

Did you know hydrogen communicates?

See: <https://www.sciencedirect.com/science/article/pii/S2451929421003715>

Do you believe it is possible that people are mistaking hydrogen for ghosts?

Do you believe it is possible people are intuiting molecular 'memory' as a result of hydrogen communicating during the bonding process and potentially misinterpreting it to be supernatural in origin?

Do you believe it is possible Electromagnetic Frequency detectors are actually picking up the atomic communication or transmission of hydrogen looking to establish bonds?

END
